

AccuPoint[®] Advanced

A New Level of Clean

ATP sanitation verification that delivers

Simplicity • Audit compliance • Brand protection

Expect more.

Sanitation verification forms the core of food safety programs, and can catch problems before they ever reach consumers. Preventing contamination with pathogens or allergens protects public health—and brand integrity.

Up to 35% of food recalls are related to poor sanitation. Many of these may have been prevented if effective monitoring programs were in place¹.

Neogen's AccuPoint® Advanced system (integrated sampler, reader and software) provides an economical, fast and accurate way to monitor cleanliness by measuring adenosine triphosphate (ATP) on surfaces or in liquids.

No matter if your sanitation program is basic, enhanced or advanced, AccuPoint Advanced is ready when you are.

Design simplicity

The patented flat head sampler ensures maximum recovery of ATP. Also, the design helps ensure that all recovered ATP gets converted to signal by having the needed reagents in close proximity.

Traditional swab sample pattern

NSF Independent proof of performance from NSF

NSF International, the global authority and standards-setting body for sanitation, performed a study comparing the top five ATP sanitation verification systems under real-world conditions. The AccuPoint Advanced system proved to be the most ACCURATE and CONSISTENT.

AccuPoint Advanced samplers

Since ATP is not evenly distributed on surfaces, Neogen's Advanced sampling pad and chemistry are designed to recover and detect small amounts of ATP.

- Neogen's proprietary sampler is designed specifically to maximize recovery of ATP from surfaces and liquids.
- Newly developed liquid stable chemistry provides more consistent results.
- Samplers can be kept out of refrigeration for up to 2 weeks.

AccuPoint Advanced instrument

AccuPoint Advanced is the most compact instrument on the market. With updated firmware and RFID technology, it offers the latest technology in the smallest instrument.

- Faster time to result (<20 seconds) allows more data collection in less time.
- RFID technology (optional feature) streamlines the process of collecting sanitation data by choosing the site to be tested based on your preference.
- Unique relative light unit (RLU) scale offers higher resolution across all levels to identify deviations in ATP baselines.

AccuPoint Advanced Data Manager

AccuPoint Advanced's Data Manager software allows users to streamline the testing process by quickly creating test plans, syncing important data, and keeping a permanent record of sanitation results to verify SSOPs for audit compliance.

- View pass rate percentages for entire facility, groups, sites or users to help drive continuous improvement.
- Use the rank report to quickly identify areas that need attention.
- Use the trend report to view RLU baselines.

Corporate profile

Founded in 1982, Neogen Corporation (NASDAQ: NEOG) has grown to have a worldwide presence, with more than 1,000 employees in multiple U.S. and international locations. Neogen remains firmly committed to consistently meeting the quality standards customers expect.

Neogen's Food Safety Division develops and markets solutions to simply, rapidly and accurately detect bacterial pathogens, mycotoxins, spoilage microorganisms, food allergens, genetic modifications, drug and pesticide residues and sanitation concerns in food and animal feed.

Informed Decisions

AccuPoint Advanced provides the information users need when they need it.

Prevention and Compliance

AccuPoint Advanced can help producers verify their sanitation and preventive control programs are effective.

Brand Protection

AccuPoint Advanced provides confidence in results that maintain brand reputation.
